

ArrivalScope · User Manual

arrivalscope.pages.dev · Scope Technologies

1. What ArrivalScope is

ArrivalScope is a free, mobile-friendly web page that puts the **ATL Concourse E & F international arrivals and departures board** next to **open-source intelligence**: public CBP and ICE news, CDC travel health notices, and agriculture alerts. It is built for officers and any intel or analyst team who wants a quick look at the floor. It isn't tied to one unit.

Important: everything comes from public sources. ArrivalScope is a **situational-awareness helper**, not an official CBP system, a targeting tool, or a finished intelligence product. Always confirm against official systems.

2. The tabs at a glance

Tab	What it's for
Scope	Live E & F board: Arrivals / Departures, E, F or Both concourses
Intel	Open-source headlines with filters: All / Narcotics / Ag / CDC
High-Risk	Today's arrivals from drug-source and transit regions, on a map and as cards
Tools	Quick links: legal authority, agriculture, CDC, HR Corner, more
Calendar	Dates and events relevant to the floor
PDF	The Scope Monthly Brief (intel only) to read or print

3. Reading the Scope board

- Each card shows the **origin city and airport code**, a **country flag**, a small **origin map**, the flight number and airline, **arrival time (ET)**, **gate**, **passenger count** and **belt**.
- The green **NOW** chip shows the live status time. "Queried at" shows when the board was last pulled.
- The map shows where the flight came from. *It is not a live flight track.*
- **Tomorrow / next-day flights:** flights after midnight carry a 🌙 **tomorrow AM** badge and sort **after** today's flights, so the board stays in floor order.
- The E Concourse / F Concourse / Both buttons narrow the list. Arrivals / Departures switches the board.

4. High-Risk Flights Today

- Lists today's ATL E & F arrivals from **Source country** origins (Mexico, Colombia, Peru, Bolivia) and **Transit region** origins (Central America, Caribbean, rest of South America). A red count on the tab shows how many there are.
- **Map:** lanes run from each origin to ATL. Thicker lines mean more arrivals on that lane today.
- **Click a card** to zoom the map to its lane and open details: board status, belt, lane count, Intel headlines that mention the origin, and a FlightAware link. Click again or tap **Show all lanes** to reset.
- **AG** badge: agriculture watch for that origin (for example pork / African swine fever for Haiti, the DR and PR; Medfly for San Juan; mango and produce; Mexico holiday produce). The details card shows an **Ag watch** box with the Form 6059B Question 11 declaration reminder.
- **CDC** badge: a current CDC travel health notice names that origin country. The **CDC notice** box links to the notice.

5. Intel

- **Filters:** **All** · **Narcotics** · **Ag** · **CDC**. "All" keeps narcotics first and adds a few Ag and CDC items.
- **Narcotics:** seizure and trafficking news from ICE and CBP public feeds, plus State Department Level 3–4 travel advisories in the ticker.
- **Ag:** CBP/ICE items about prohibited agriculture: fruit, meats and pork, seeds, plant pests, beagle-team finds.
- **CDC:** official CDC Travel Health Notices, Levels 1–4, for example Ebola, yellow fever, chikungunya and polio. Higher levels are listed first.
- **Refresh:** feeds update automatically when people use the site (about every 30 minutes for Ag/CDC). If a feed is down, the last saved items are shown with a "stale" note.

6. Banners

Short, dismissible strips under the header (the × hides one for your session):

- 🎃 **Seasonal:** for example Halloween.
- 🌳 **Posada season** (Dec 1–Jan 6): watch for guava, tejocote and sugarcane from Mexico.
- 🦟 **SJU Medfly quarantine:** host fruit on San Juan flights.
- 🏥 **CDC Level 2+:** shows when the CDC feed has a Level 2 or higher notice. Tap it to open the notice.

7. Tools highlights

- **Agriculture quick-ref:** APHIS rules for fruits and vegetables, meats and pork, African swine fever, plants and seeds; CBP agricultural products (6059B Question 11); CBP passenger ag stats.
- **CDC travel health quick-ref:** Travel Notices, Destinations, Ebola, the Health Alert Network, Quarantine stations.
- **CBPO Legal Authority:** 8 U.S.C. § 1357, 19 U.S.C. § 1496, Miranda card.

- **HR Corner:** pay period countdown, Employee Express, TSP, FEHB, leave, retirement, EAP, NTEU.
- Other helpers you may see, such as useful addresses, ham radio, Spanish phrases, and the radar / Listen pages.

8. PDF / Scope Monthly Brief

The **PDF** tab and the Intel **Monthly Brief** button open the Scope Monthly Brief: a printable, intel-only summary of open-source trends. It doesn't contain any flight or passenger data.

9. Tips

- **Not updating?** Hard refresh: Ctrl/Cmd + Shift + R on desktop, or pull down / reopen the tab on mobile.
- **Header chips:**  weather (tap for the NWS forecast), **FAA** ATL status (tap for the FAA NAS status page), and today's date.
- **Mobile:** the site is designed for phones. Use "Add to Home Screen" for one-tap access.
- **Deep links:** add ?tab=intel, ?tab=risk or ?tab=tools to the address to open a tab directly.
- Owner-only usage stats live at a separate password-protected page. Officers don't need it.
